

**CUDDLING
CUSTOMERS
THROUGH
APP CHANGES**

HELLO

HOW CAN **HUNCH** HELP?

The MyOneNZ app is having some upgrades:

- A great new dashboard to make things easier.
- A secure new way for customers to sign in.

You've asked for support on different aspects of the project. **Here's where we can add most value.**

TWO KEY DATES

25
SEP

25
OCT

NEW DASHBOARD

- New easier to use app dashboard
- Timed to align with Peak Trading
- Permissions and offers updated
- Timed to align with Peak Trading

"My app just got better. I like this"

NEW SIGN UP

- New, easier and more secure login
- New sign up journey
- **All customers need to download app**
- Once in, it's better and safer

"What happened to my app?
It updated fine before."

Customers are likely to see these projects as one thing:

"The app is changing to make it easier and better".

JANET'S
JOURNEY

TODAY

"My app works,
bit janky, but it works"

FROM 25 SEP

"The app's had a
makeover. Nice"

POST 25 OCT

"What's going on
with my app? Grrr"

AFTER SET UP

"Face ID. Easy. I don't
remember the old one."

BEST PRACTICE RESEARCH

Key finding

- **Users expect to sign in quickly**, especially in utility apps like telco apps where their goal is to check usage, pay bills, or manage services—not learn the app first.
- **Don't delay the user's first value.** Industry best practice is to get users to their dashboard or primary task as quickly as possible.
- **Mandatory tutorials before login create friction** and can increase abandonment during first-time use.
- **Marketing content and product onboarding serve different purposes** and should generally be separated.
 - Marketing = communicate brand/value proposition.
 - Onboarding = help users accomplish tasks.
- **A 5-second marketing video before login is uncommon** among leading consumer apps and telco competitors because it interrupts the primary user goal.
- **Feature tutorials are most effective when shown in context**, after users can see and interact with the actual UI.
- **Returning users should not be forced through onboarding again.** Tutorials should only appear once and remain accessible later from Help or Settings.
- **Allow users to skip onboarding** and easily access it later if they need it.
- **Keep onboarding short.** Most platform guidelines recommend no more than 2–3 introductory screens before users reach the product.

UX Research Findings & Industry Best Practices

Apple HIG

"Defer permission requests until context is clear." Never gate core functionality behind onboarding.

Material Design

Use progressive disclosure – reveal features as users explore, not upfront.

Nielsen Norman Group

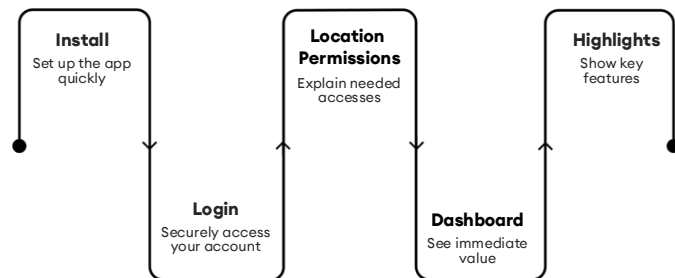

On-screen instructions are ignored. Contextual coach marks outperform pre-login tutorials.

WCAG 2.2

Provide skip options, reduce motion, ensure keyboard support and screen reader compatibility.

Final Recommendation Roadmap

Recommended flow delivers value before education, reducing drop-off risk.

Option A — Business Proposal

Tutorial + marketing video **before** login. Higher exposure, higher drop-off risk.

Option B — Recommended

Tutorial **after** dashboard access. Lower friction, higher completion and NPS.

Summary

⚡ Fast Access

Users must reach their dashboard before any tutorial or marketing content. First value drives retention.

🧠 Contextual Learning

Tutorials are most effective when triggered in-context – after the user has explored the dashboard, **not before login**.

📌 Reduce Friction

Every pre-dashboard step **increases drop-off risk**. Remove the pre-login marketing video and defer tutorials post-login.

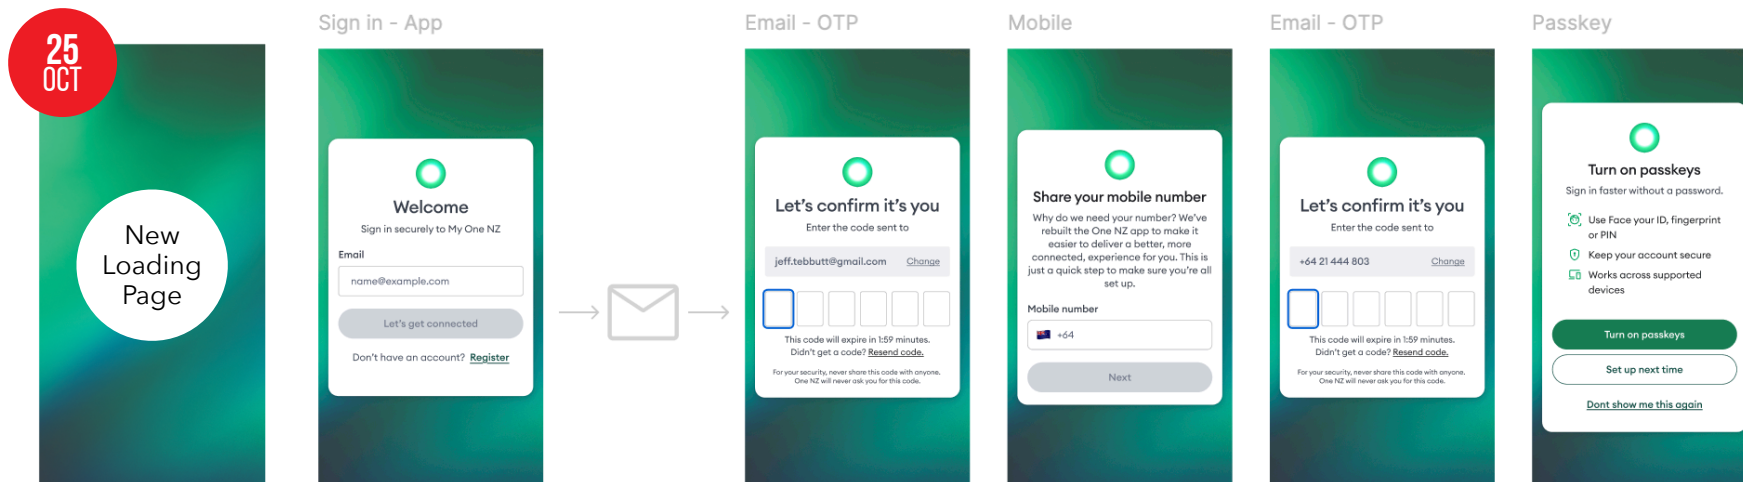

Key Takeaway: Defer all educational and marketing content until after the user has accessed their dashboard for the first time.

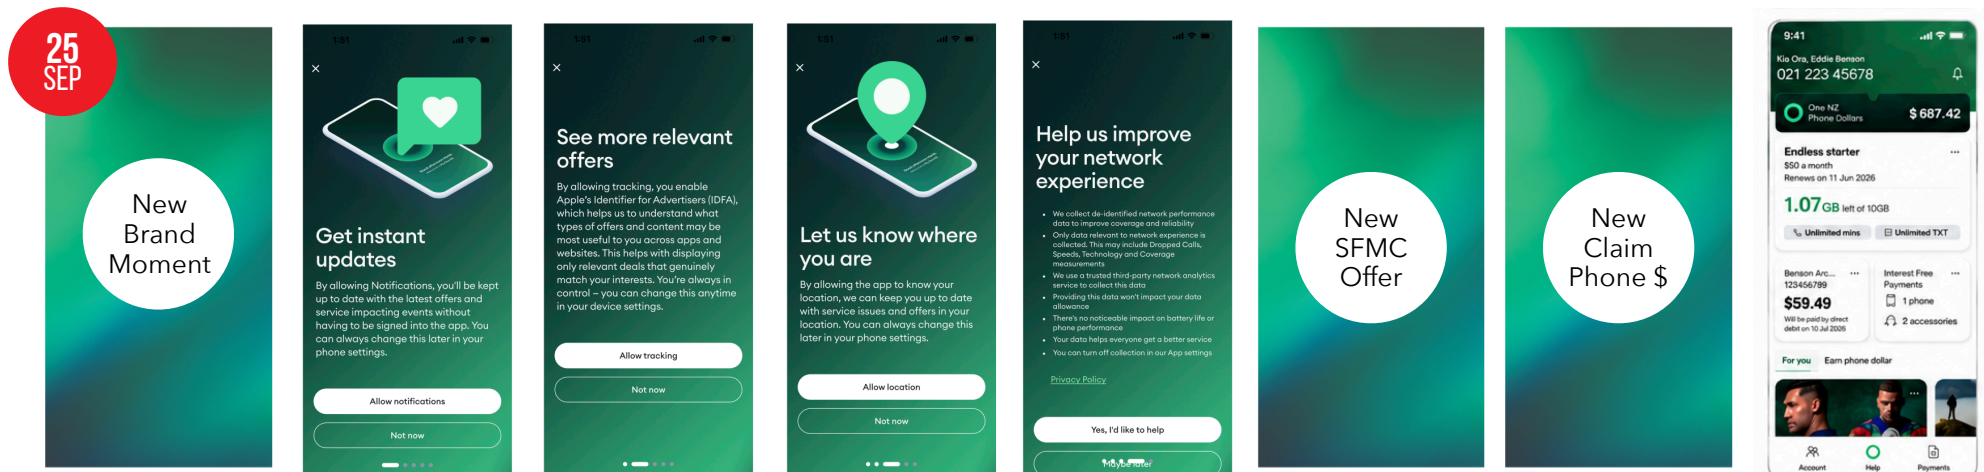

Summary: Anything that gets between the customer and their app dashboard is not likely to be welcome.

WHAT'S THE **DOWNLOAD** JOURNEY?

Updated from October 25 - (New registration journey with one time passwords)

Updated for Sept 25 - (wallet updates, intro to dashboard, branding moment.)

THINKING ABOUT
BRAND MOMENTS

LOADING: WHAT COULD WE DO NOW?

Purpose:

Warm brand welcome to the app.

Concept:

Start with a brand background or hero 'connection' still from the story.

Line animates in with a bright green pixel that wraps into a bubble.

If it's possible to recognise existing customers. Could say:

"Let's get re: connected".

Loading bar shows progress.

Considerations:

Static image and light animation keeps the file-size light. Design work vs production work to complete.

Specific shots will need brand sign off.

LOADING 2: WHAT COULD WE DO NOW?

Purpose:

Brand warm up after registration.
Leads into permissions

Concept:

Same concept, different line.
"Do more, get more" reflects the membership prop and reinforces the value of permissions.

Loading bar shows progress.

Considerations:

Static image and light animation keeps the file-size light. Design work vs production work to complete.

Specific shots will need brand sign off.

CONCEPTS: WHAT COULD WE DO LATER?

Purpose:

Bring a quick brand smile while the app is loading.

Concept:

Two-second videos using a character familiar from the story.
eg: Grant might knock on the 'window' of the phone screen or be surprised by the customer arriving.

Considerations:

This would require a film shoot with associated timing and rights issues, plus additional agency costs.

POTENTIAL - VARIETY OF MOMENTS

Christmas moment

Summer moment

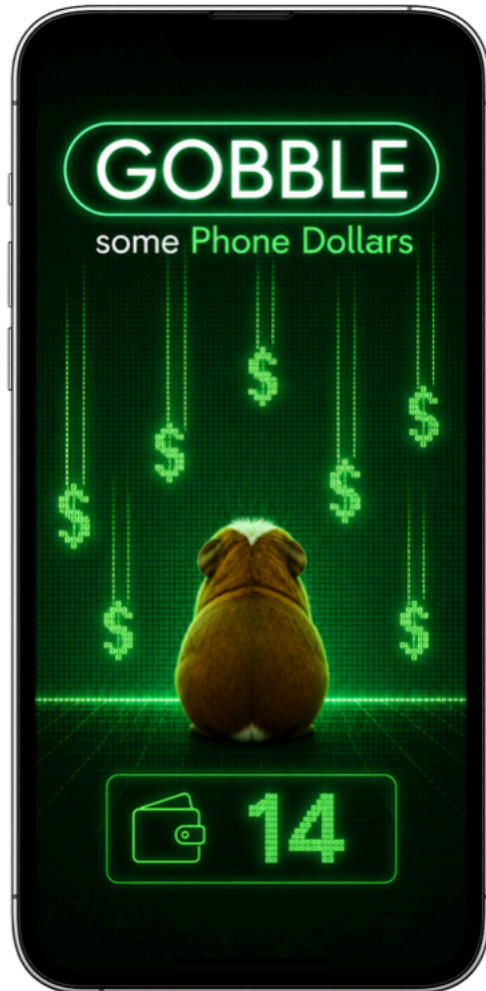

Security update

Spruce up

AI Renders - Concept Only

CONCEPTS: MAKE IT A GAME

Purpose:

Quick interaction that amplifies the incentive.

Concept:

Super simple (and silly) game where Simon grabs phone dollars as the page loads. Number jumps up to \$25 at the end.

Considerations:

Needs to be really simple and really fast. Build time and cost not scoped yet.

THINKING ABOUT
CHANGE COMMS

CUSTOMER COMMS PLAN

ACTIVE CUSTOMERS

APP STOPS WORKING

CLEAR MESSAGE IN APP DOWNLOAD PAGE

TRIGGERED
SMS MSG

Did you clock the new dashboard?
We're also bringing a new system to make logins easier.
You'll need to download and set up from Oct 25

EMAIL TO
EVERYONE

We're making your app easier and secure.
There's a new system to make logins easier.
You'll need to download and set up next time.

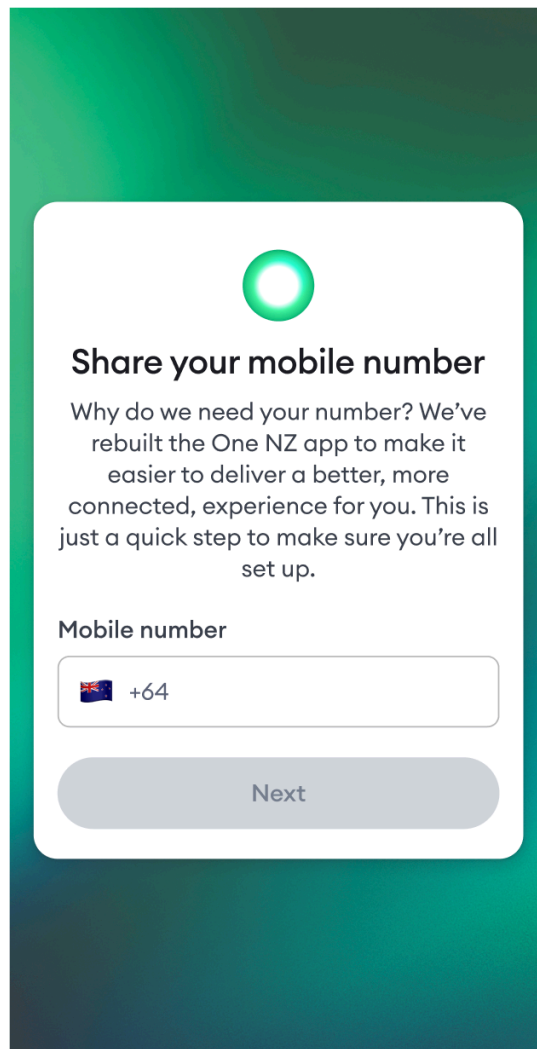

ALL CUSTOMERS

Note: Likely confusion when the app stops working. Reactive Call Centre, web page and social management will help.

THINKING ABOUT
APP LANGUAGE

TONE TWEAKS - MAKING THE APP FEEL “US”

Original app screen showing a form to share a mobile number. The title is "Share your mobile number". The text explains why the number is needed: "Why do we need your number? We've rebuilt the One NZ app to make it easier to deliver a better, more connected, experience for you. This is just a quick step to make sure you're all set up." The form includes a label "Mobile number", a text input field with a New Zealand flag icon and "+64", and a "Next" button.

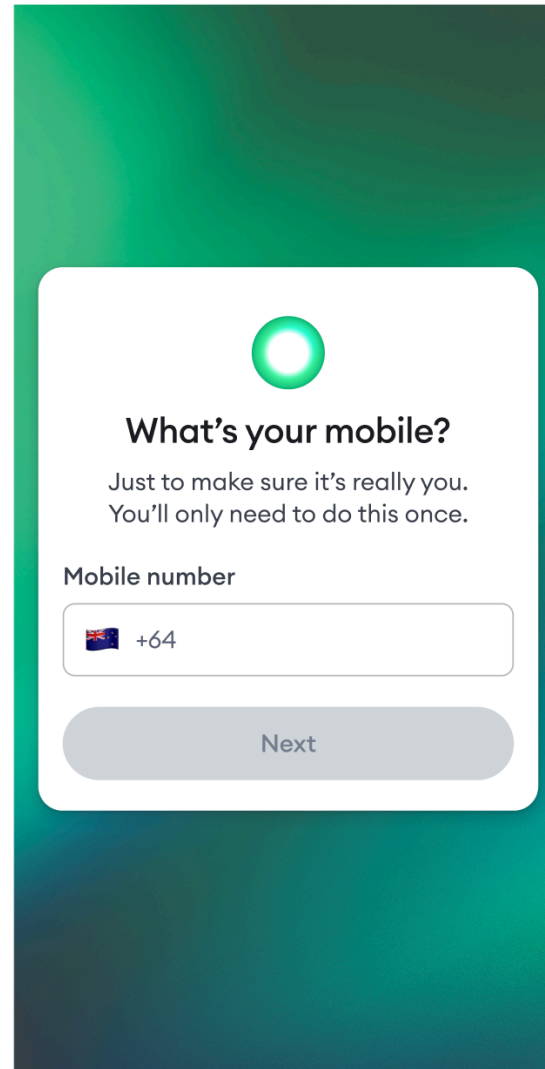

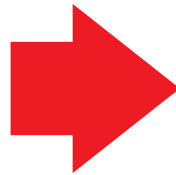

Share your mobile number

Why do we need your number? We've rebuilt the One NZ app to make it easier to deliver a better, more connected, experience for you. This is just a quick step to make sure you're all set up.

Mobile number

+64

Next

Revised app screen showing a form to share a mobile number. The title is "What's your mobile?". The text is simplified: "Just to make sure it's really you. You'll only need to do this once." The form includes a label "Mobile number", a text input field with a New Zealand flag icon and "+64", and a "Next" button.

What's your mobile?

Just to make sure it's really you. You'll only need to do this once.

Mobile number

Job to do:

Review app copy to make it simple, clear and tonally on brand.

Focus on benefits to the customer and highlight ease where we can.

QUESTIONS

What's the timeline?

App releases are planned for 25 Sept and 25 October?

What needs to be done by when to meet these dates?

What are the priorities?

Of the different jobs: Brand moment, app copy, customer comms, which are the ones to prioritise first?

Who will do what?

Hunch can help with app copy and customer comms.

Build of video or game will need different expertise.

What's the journey?

Current plan as different canvases delivering different functionality.

Specifics of messaging and sequencing need more clarity.

Current plan is out of alignment with internal best practice research.

Peak Trading Considerations?

Dashboard innovation is timed to maximise Peak Trading.

ID updates on Oct 15 will mean everyone needs to download a 'new' app.

Is their merit in timing the ID work for Jan?
